

The most valuable customer experience starts on Day Zero.

Onboarding is the first proof point of whether a customer will trust us, adopt us, and renew with us. If the experience is confusing, slow, or dependent on scarce human support, customers lose momentum before they ever reach value. If the experience is clear, guided, and fast, customers realize value sooner, build confidence faster, and establish the foundation for long-term growth, adoption, and retention.

Why this matters

Today, too many customers are forced to self-navigate complex setup and activation journeys without enough expert guidance. Many customers lack a named support resource, a dedicated admin, or the knowledge needed to configure Salesforce successfully, which turns onboarding into a high-friction and often abandoned process. Long onboarding timelines, incomplete setups, and onboarding-related support cases are all symptoms of the same underlying problem: customers are not getting to value quickly or consistently enough.

The business problem

We do not have a scalable way to deliver expert-quality onboarding and adoption guidance to every customer at web scale. Human-led onboarding is too variable, too expensive, and too limited to cover every customer consistently. As a result, customers get different experiences, setup quality varies, and too many never reach the first meaningful outcome that drives continued usage and renewal.

Here's what we're seeing today...

- 56% of all customers have no named salesforce support resource to drive their success objectives
- 50% of customers (250K) struggle to set up Salesforce due to lack of knowledge and expert guidance
- 50% of Salesforce SMB customers have no Admin or Technical POC ~ “accidental Admins”
- 47% of all customers spend 90 ~ 180 days onboarding Salesforce ~ “painfully too long”

The Agentic product opportunity

Agent-led onboarding solves this by giving every customer a guided, expert-like experience that can configure the system, direct the next best step, and keep the customer moving toward value. Instead of leaving customers to figure it out alone, the agent acts like a skilled onboarding coach that understands the desired outcome, applies a standardized methodology, and removes unnecessary manual effort. This makes the experience faster, more precise, more consistent, and more likely to produce successful activation.

Why customers will want it

Customers want progress, not process. They do not want to search for the right setup path, interpret vague instructions, or wait for someone to tell them what to do next. They want confidence that they are configuring the product correctly, achieving meaningful outcomes sooner, and avoiding costly mistakes. A guided agent that does the work, explains the why, and leads them to value is not just convenient; it directly solves the biggest onboarding pain points.

What comes next

Once onboarding is successful, the same foundation can power proactive adoption across the full customer lifecycle. The agent can help customers define goals, identify underused high-value capabilities, surface relevant recommendations, and trigger the next best action based on role and business outcome. That turns the product from something customers merely set up into something that continuously helps them succeed, expand, and renew.

Business outcomes

Agent-led onboarding and proactive adoption should be framed as a growth and retention engine, not just a support efficiency play. The expected impact is faster time to value, higher feature activation, fewer support cases, lower abandonment, better customer satisfaction, and stronger renewal performance. In short, the feature set is desirable because it removes friction at the moment customers are most vulnerable and replaces uncertainty with guided progress toward value

My analysis reveals that the opportunity is real:

- \$3.75 Billion net-new renewal revenue derived from a zero-touch sales process

- 28% increase in core feature activation

- 22% increase in Renewal rates across SMB, Standard, Premier Customer Success Plans

- 20% decrease in attrition rate across SMB, Standard, Premier Customer Success Plans

- 8% increase in Customer Satisfaction Score (CSAT), related Net Promoter Score (NPS) and Customer Effort Score (CES)
